

Administration manual

Introduction

This administration manual is intended for a well-known game of TicTacToe. The game is accessible via browser, following this link: www.example.com. This manual is intended administrative purposes in order to set the program up on a server(?).

Programs

The following programs are needed to run TicTacToe using a text editor of choice.

- Java
- Git Bash (for Windows) or Terminal (for MacOS and Linux)
- A GitHub account

Installation

- Clone git repository: <https://github.com/Hugbunadarhugar/TicTacToe.git>
- Set up git
- Install Java

Run

In order to run the TicTacToe program locally, use the following commands:

- `npm build` (to build the project)
- `npm run` (to run the project)
- `npm start` (to start the server, it listens on port 5000)
- `npm run startCon` (to run the client and the API at the same time)
- `npm run mdtopdf` (to convert markdown to pdf/ also updates the pdf files if the markdowns are changed)
